

ALPHACOO – THE COOLING COMPANY

Alphacool NexXxoS GPX – N 2070 M06

What is it?

With the Alphacool NexXxoS GPX cooler you get an all around well processed cooler which even includes the backplate. This encloses connects on the front side of the graphics card with the actual cooler and can thus dissipate the heat from the back directly to the water. The nice side effect is that the PCB of the graphics card is covered and the cooler looks like it is made of one piece.

Highlights

- Extremely good GPU cooling
- Backplate enclosed
- Backplate covers the PCB of the graphics card
- High-quality haptics

Version: 16.10.2019

Scope of delivery	
2 pcs. M3x6 2 pcs. M3 washer 8 pcs. M3x11	2 pcs. 30 x 30 x 1,5 mm Thermal pad 8 pcs. 15 x 15 x 1,5 mm Thermal pad 3 pcs. 30 x 30 x 3 mm Thermal pad 8 pcs. 15 x 15 x 3 mm Thermal pad

Technical data GPU cooler	
B x T x H	113 x 267 x 39 mm
Net weight	738 g
Max working temperature	60 °C
Material cooler	nickel-plated copper
Thikness of fins	0,6 mm
Material heat sink	Aluminium
Threads	2 x G1/4"
Pressure tested	1,5 Bar
Certificates	CE, FCC, RoHS

Other data	
Article number Alphacool	11748
EAN Code	4250197117487
PU Box	1
Dimensions PU B x T x H	13,3 x 34,2 x 5,5 cm,
Weight	1,350 g
Customs code	84195080900

Article text

The Alphacool NexXoS GPX is a high-performance graphics card water cooler, which is not only physically beautiful, but also high performing.

Optimum Use of High-Quality Materials

Our Alphacool NexXoS GPX cooler is available for many different NVIDIA® and RADEON® graphics card models. We use completely nickel-plated copper bottoms for our cooling plates, which are made of one solid piece. We have meticulously designed the water-bearing channels so that a high flow rate is possible ensuring heat is optimally dissipated. All of the parts that contact water are made of pure copper or high-quality plastics. Problems with corrosion due to different metals are therefore eliminated.

Durable and Stylish

All our NexXoS GPX graphic card have a backplate included. This not only looks stylish, but also increases the cooling performance. This further protects the voltage converters and in turn, increases the service life of the graphics card.

Silent PC

In addition to a great look and the protection of the hardware, the reduction of noise is of course also a big factor when it comes to water cooling. Due to this, it allows the heat to get to the radiator faster and depending on the size of the selected radiator and the fan speed, it is possible to upgrade your computer in such a way that it really deserves the partially inflationary term "Silent PC".
